

Meta Ad Performance Analysis

Dashboard Insights (Facebook + Instagram)

KPI Metrics

- **Impressions: 339.8K** (Facebook 216.0K + Instagram 123.8K): Combined reach across both platforms.
- **Clicks: 40.1K** (FB 25.4K + IG 14.7K)
- **Shares: 2.0K, Comments: 4.1K:** Organic engagement signals across both platforms.
- **Purchases (Conversions): ~2.0K:** Combined customer acquisitions from ads.
- **Engagements: 46.2K:** Sum of clicks, shares, comments across both platforms.
- **CTR: 11.80%:** Blended click-through rate. Instagram (11.86%) edges out Facebook (11.76%) slightly.
- **Engagement Rate: 13.59%:** Consistent across both platforms (FB 13.56%, IG 13.60%), so audience response is uniform regardless of channel.
- **Conversion Rate: 5.01%:** Facebook converts clicks to purchases better (5.21%) than Instagram (4.82%).
- **Purchase Rate: 0.59%:** Facebook (0.61%) slightly outperforms Instagram (0.57%) on impression-to-purchase efficiency.
- **Total Budget: \$2.5M:** This is the total campaign budget shared across both platforms. Because campaigns can run ads on both Facebook and Instagram, this figure is not additive across the two tabs (it stays \$2.5M, not \$5M).
- **Avg Budget per Campaign: \$50.7K:** Same reasoning: reflects the shared campaign set, ~49 campaigns.

Insight: Facebook is the stronger platform on conversion efficiency (higher CR and PR), while Instagram is marginally stronger on CTR. Both platforms show near-identical engagement rates, meaning content resonates similarly regardless of channel. The real differentiator between the two platforms is what happens after the click, not before it.

Engagement Breakdown

By Gender (Impressions by Gender, Donut Chart, combined)

- Female: 141K (41.5%)
- Male: 78K (22.9%)
- Not Specified/All: 121K (35.6%)

Female-attributed impressions lead on both platforms individually (FB 44%, IG 37%) and combined. Note: this chart reflects the "Impressions" measure as set on

the dashboard's dynamic selector. Switching that selector to Engagements or Purchases will shift these numbers, so treat this as a targeting/reach split rather than a proven engagement-behavior split.

By Age (Impressions by Age, Bar Chart, both platforms)

- Both Facebook and Instagram show the same shape: impressions peak in the low-to-mid 20s age range and decline steadily with age, tapering off after ~40.
- Primary audience = young adults, consistent across both channels.

Insight: Audience skew (young, female-leaning) is consistent across platforms. This isn't a Facebook-vs-Instagram difference, it's a targeting characteristic of the campaigns overall.

Geographic Distribution

- Top contributing regions (both platforms): clusters visible in North America (US), South America (Brazil), Europe (likely UK/Germany), and South Asia (India).
- Note: exact country-level numbers aren't legible from the map view alone, so confirm via tooltip/hover or the underlying users table before using these for budget decisions.

Time-Based Trends

Weekly Trend (Stacked Column by Ad Type)

- Both platforms show fairly consistent week-over-week volume with no sharp drop-offs: steady delivery, not front- or back-loaded.

Hourly Trend (Area/Line Chart)

- The hourly chart on both tabs shows a fluctuating, multi-peak pattern. Activity oscillates throughout the day with several local peaks.
- Recommendation: before using this for scheduling decisions, pull the actual hour-by-hour averages (rather than reading the line chart visually) to confirm whether a real day-part pattern exists or whether it's noise from a small per-hour sample size.

Calendar View

- The calendar heat map on both tabs is currently set to July.
- Color variation across days is subtle in the exported view, so specific "peak days" can't be reliably read off the image. Recommend checking exact date-level values in the live dashboard before citing specific high-activity dates.

Analysis by Ad Type (Combined)

Ad Type	Impressions	Clicks	CTR	Purchase Rate	Conversion Rate	Engagement Rate
Carousel	29.4K	3.4K	11.69%	0.63%	5.38%	13.42%
Image	29.9K	3.6K	11.88%	0.60%	5.04%	13.61%
Stories	36.9K	4.4K	11.86%	0.62%	5.19%	13.73%
Video	19.1K	2.3K	12.20%	0.55%	4.50%	14.13%

Note: this table's totals reflect only the ad-type-tagged rows visible in each platform's table (they sum to ~115K impressions vs. 339.8K total). There's a gap between this breakdown and the top-line KPIs in the source dashboard that's worth investigating in the underlying data model before reporting these as complete.

Insight: Video leads on CTR (12.20%) and Engagement Rate (14.13%), so it drives the most attention and interaction. However, it has the lowest Conversion Rate (4.50%) and Purchase Rate (0.55%) of all four formats. This holds on both platforms individually, not just combined. On Instagram specifically, Video underperforms on nearly every metric. Video is best at generating attention rather than purchases.

- **Best for awareness/reach:** Video
- **Best for conversion:** Carousel (5.38% CR)
- **Best overall balance + volume:** Stories (highest impressions, solid mid-pack rates across the board)

Final Insights & Recommendations

1. **Funnel:** Strong top-funnel performance (CTR ~11.8%, ER ~13.6%) across both platforms, but conversion efficiency is the weak point (Purchase Rate 0.59%). This is a funnel problem, not a platform-specific one.
2. **Platform split:** Facebook converts better (CR 5.21% vs 4.82%); Instagram gets marginally better CTR. Consider weighting budget toward Facebook for conversion-focused campaigns and Instagram for awareness/reach campaigns.
3. **Target audience:** Young adults (peak 20s), female-skewing, consistent across both platforms.
4. **Ad format strategy:** Use Video for reach/awareness goals, but pair it with Carousel or Stories for conversion-focused campaigns, since Video converts worst of the four formats.
