

Project: Social Media Ad Performance Dashboard

Purpose

The team needs a reporting tool that tracks how paid campaigns are performing on social platforms. It should give a clear picture of reach, audience interaction, conversions, and spend efficiency, so stakeholders can:

- Compare platforms/ad formats to see which drives better results
- Monitor spend against outcomes and reallocate budget where it performs best
- Understand which audience segments respond most to the ads

Scope

- *In scope:* campaigns and events covered by the source dataset (specify your platforms, e.g. Facebook/Instagram)
- *Out of scope:* any channel not present in the data. Unpaid/organic activity is excluded; only paid ad events are measured

Metric Definitions

Metric	What it measures	How it's calculated
Impressions	How many times an ad was displayed	Count of "impression" events
Clicks	How many times someone clicked an ad	Count of "click" events
Shares	How often an ad was shared	Count of "share" events
Comments	How many comments an ad received	Count of "comment" events
Purchases	How many purchases followed an ad interaction	Count of "purchase" events
Engagements	Total interaction volume	Clicks + Shares + Comments
CTR	Share of impressions that turned into a click	$\text{Clicks} \div \text{Impressions} \times 100$
Engagement Rate	Share of impressions that led to any interaction	$\text{Engagements} \div \text{Impressions} \times 100$
Conversion Rate	Share of clicks that resulted in a purchase	$\text{Purchases} \div \text{Clicks} \times 100$
Purchase Rate	Share of impressions that resulted in a purchase	$\text{Purchases} \div \text{Impressions} \times 100$
Total Budget	Combined spend across campaigns	Sum of campaign budgets
Avg. Budget per Campaign	Typical spend per campaign	$\text{Total Budget} \div \text{Number of Campaigns}$

Visualization Plan

1. **Audience gender split:** donut chart showing how the selected metric breaks down by target gender; helps identify which gender segment engages most.
2. **Audience age split:** bar chart showing the selected metric across age brackets; highlights the most responsive age group.
3. **Geographic reach:** map view sized/colored by the selected metric per country; shows where campaigns land best.
4. **Monthly activity heat map:** calendar-style view where shading intensity reflects activity level per day, useful for spotting seasonal or promotional spikes.
5. **Weekly trend by format:** stacked column chart with week on the x-axis and ad format as the stack, to compare how each format contributes over time.
6. **Hourly activity pattern:** area chart plotting the selected metric across the 24-hour clock, to find peak engagement windows.
7. **Format x platform matrix:** table comparing the selected metric across ad formats and, where relevant, platforms side by side.
